

RTPs can come in a variety of shapes and sizes. This manual contains the general guidelines for the installation of trackers on RTPs. We use a fairly generic RTP form factor for this.

Do's	Don't's
<ul style="list-style-type: none"> • As high as possible • Vertical installation is preferred (logo up) • Clear view on the sky • Use asset's cavities to install the tracker 	<ul style="list-style-type: none"> • Not on moving parts or close to the wheels because shocks might damage the tracker • Under the chassis because of bad signal • On the side where the tracker might get hit by other equipment
